ANNEXURE I
CHEMICAL ENGINEERING
(Includes leather, Sugar, Textile Technology, CHPC, CHPP, and CHOT)

1. Material technology: Mechanical properties of metals and Testing of materials – thermal
equilibrium diagram- Production of Iron-plain carbon steels, alloy steels - Miscellaneous
materials – Glass, carbon, graphite, rubber, elastomers, fiberglass and FRP etc.. – Corrosion-
causes, types, methods of prevention.

2. Chemical process principles: Determination of molarity, molality & normality, analysis
of solids , liquids and gases on dry and wet basis , Daltons law , ideal gas equation of state ,
vapor pressure boiling point and freezing point , elevation of boiling point and depression of
freezing point-uses, Bypassing &Recycling & purge streams – uses , limiting component ,
excess reactant , percentage conversion & yield and degree of completion , Material balances
with and without chemical reactions, law of conservation of energy , heat of reaction , heat
of formation , and heat of combustion – related problems , gross and net calorific values ,
thoretical air and excess air calculations.

3. Organic Chemical Technology: Coal chemicals, coking of coal, coal tar distillation,
petroleum refining-atmospheric distillation and vacuum distillation , fluid catalytic cracking ,
catalytic reforming , petrochemicals from methane and ethylene , pulp and paper industry ,
oils , fats and soaps ,sugar & fermentation, rubber industries.

4. Inorganic Chemical Technology: Water-sources, impurities-treatment-dissolved solids-
ion exchange process and Reverse Osmosis (RO) process, manufacture of chemicals like,
soda ash, ammonia, Urea, nitric acid, sulphuric acid, phosphoric acid, Super Phosphate and
industrial Gases ,paints, pigments and varnishes, graphite and silicon carbide and cement.

5. Fluid mechanics: Flow of incompressible fluids, Newtonian and non-Newtonian fluids,
viscosity, Bernoulli’s theorem, friction losses, flow meters, different types of pumps for
transportation of fluids, Flow past immersed bodies, fluidization - packed bed and fluidized
bed.

6. Heat transfer: Conduction – mechanisms of heat flow – Fourier’s law, thermal
conductivity, steady state conduction- compound resistances in series, heat flow through a
temperature of fluid stream – Overall heat transfer coefficient – LMTD – Fouling factors –
Heat transfer to fluids with and without phase change. Radiation – fundamentals, emission of
radiation, black body radiation, laws of black body radiation – radiation between surfaces.-
Heat Exchange Equipment – types of heat exchange equipment, counter current and parallel
current flows.- Evaporation – liquid characteristics and important properties, types of
evaporators, condensers, ejectors- evaporator economy- single and multiple effect –related
problems.

7. Mechanical unit operations: Size reduction methods, laws of size reduction- crushers
and grinders. different types of equipments for mixing dry powders, differential and
cumulative screen analysis, screen effectiveness, average particle size, storage of solids,
conveyers, froth floatation, electrostatic precipitator ,scrubber, cyclone separators, filtration,
sedimentation.

8. Thermodynamics and Reaction Engineering: 1st law of Thermodynamics, PVT
relationships for gases, 2nd law of Thermodynamics, refrigeration and liquefaction,
determination of equilibrium constant and conversion, Temperature and Pressure effects on
reactions – Arhenius equation. Basic equations & working of batch, tubular and stirred tank
reactors, catalysis.

and adsorption, humidification, membrane separation, extraction and leaching, drying,
crystallization.
10. **Instrumentation & process control:** Static and dynamic characteristics of an instrument-step input, linear input, sinusoidal inputs, measurement of temperature, pressure, vacuum, liquid levels and composition, process instrumentation, diagrams and process control, different types of controllers, concepts of DCS and PLC.

11. **Environmental Studies and Pollution Control Engineering:** Scope and importance of environmental studies, segments, Eco systems, bio diversity, water pollution, types, classification, treatment methods, air pollution, types, classification, analysis, control methods, solid waste management, sources, classification, disposal, pollution control in sugar, fertilizer & petroleum industries, legal aspects.

### ANNEXURE III

**MODEL QUESTIONS FOR CHEMICAL ENGINEERING**

1. Cast iron is a _________ material.  
   1) Malleable  
   2) Ductile  
   3) Tough  
   4) Brittle.

2. The average molecular weight of air is  
   1) 20  
   2) 24  
   3) 29  
   4) 80
3. In which of the following process, temperature is constant
   1) Isobaric
   2) Iso thermal
   3) Adiabatic
   4) Adiabatic compression

4. The absorptivity of a perfect black body is
   1) 0
   2) 1
   3) 0.5
   4) 0.8

5. Ball mill is used for
   1) Attrition
   2) Coarse grinding
   3) Fine grinding
   4) Crushing
